INDEX

Sr.no	Date	Practical Name	Sign
1.		Perform the analysis for the following. **A.** Input the data warehouse data in Microsoft Excel & create the Pivot table & Pivot chart. **B.** Input the cube in Microsoft Excel and create the Pivot table and Pivot chart to perform data analysis.	
2.		Apply the what – if Analysis for data visualization. Design and generate necessary reports based on the data warehouse data. Use Excel. Scenario Manager, Goal seek, Data Table.	
3.		Perform the data classification using classification algorithm using our R/Python.	
4.		Perform the data clustering using clustering algorithm using R/Python.	
5.		Perform the linear regression on the given data warehouse data using R/Python. **A.** Create Relationship Model & Get the Coefficients. **B.** Get the Summary of the Relationship. **C.** Predict the Weight of a New Person.	
6.		Perform the logistic regression on the given data warehouse data using R/Python.	
7.		Write a python program to read data from a CSV file, perform simple data analysis, and generate basic insights. (Use Pandas is a Python library).	
8.		Perform data visualization **A.** Perform data visualization using Python on any sales data. **B.** Perform data visualization using Power BI on any sales data.	
9.		Create the Data staging area for the selected database using SQL.	
10.		Create the cube with suitable dimension and fact tables based on ROLAP, MOLAP & HOLAP model.
